## Market Data Distribution Platform

Market data, or financial information in general, is a central element in the capital markets value chain, the basis for almost all trading decisions and a link between market participants. The costs associated with market data are correspondingly high.

With the tarics+ Multi Vendor Distribution Platform, we offer our customers the possibility to integrate market data from a wide variety of vendors into applications, via a harmonized interface technology and using an authorization system spanning all vendors.

The platform allows customers to select market data best-suited for their business and to integrate them at low costs, while fulfilling relevant regulatory requirements.

### Be | Shaping the Future

We are a company with a focus on business and IT consulting. We offer our customers solutions for a successful and sustainable future.

We are the German subsidiary of Be| Shaping the Future, a pan-European business and technology consultancy with a focus on the financial services industry.

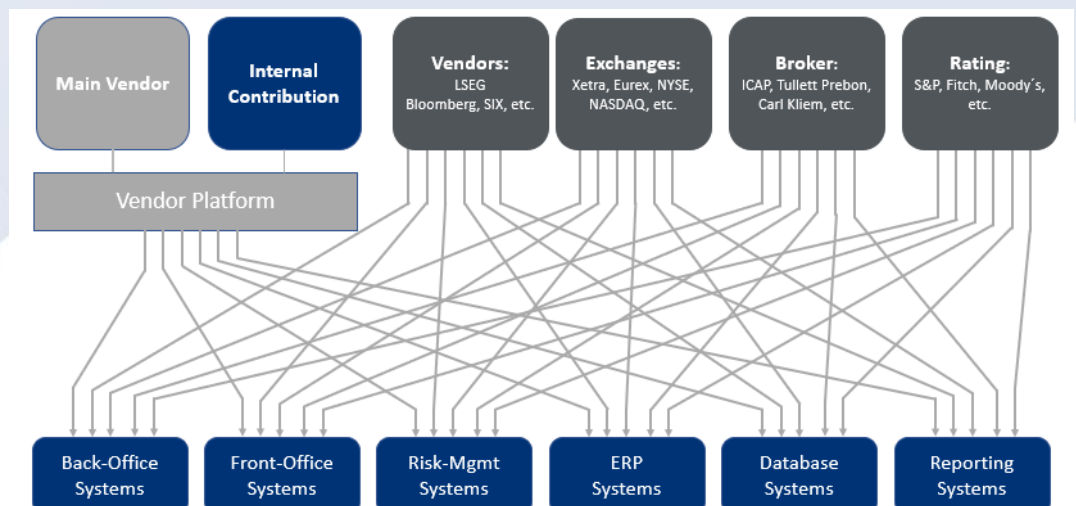

Our team of experienced and dedicated professionals will work with you to shape the future of your business and bring about lasting and positive change.

We believe that innovation, agility, and ambition are important. Our desire to be different inspires us. Our motivated employees and strong corporate culture create an environment in which individuals and teams develop positively.

### Challenges in obtaining market data without tarics+:

- Low flexibility in obtaining market data due to technological boundaries, additional licensing costs for data of "other vendors" when using a vendor's existing platform.
- Complex authorization of third-party data in vendor's systems.
- No control over how data received via a platform is used.
- Complex license models.
- High TCO, with high direct (licenses and hardware) and indirect (personnel) costs for maintaining existing solutions.
- Time-consuming and costly implementation of new regulatory requirements.
- High effort for development and maintenance due to many proprietary interfaces.

### Complex provision of market data in current practice:

**Advantages of tarics+:**

➤ **Flexibility:** Market data can be obtained from different market data vendors and providers.

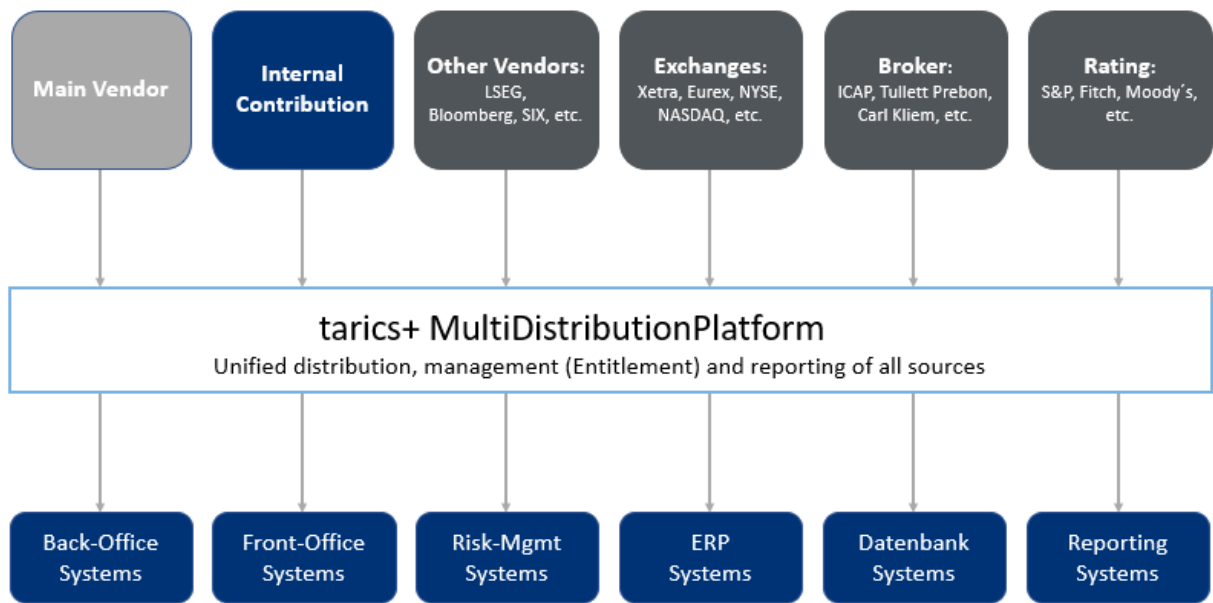

➤ **Cost reduction:** Costs due to additional usage fees, view charges, derived data fees, redistribution fees, multi-site costs, internal contribution fees, baseless price increases, unnecessary bundling are eliminated or reduced.

➤ **Compliance:** Complete overview of all market data you distribute in-house with our BeEntitled module.

➤ **Simplification:** Less reporting effort, significantly reduced maintenance effort.

➤ **Efficiency:** validation, transformation, and formatting of content based on predefined rules; throttling and prioritization possible at instrument level.

**Future flexible market data provision with tarics+:**

**More facts about tarics+:**

- Out-of-the-box solution for market data streams from different sources and providers, such as Bloomberg and Refinitiv, with a proprietary cross-vendor authorization system.
- Flexible programming APIs to integrate external sources and distribute data to internal applications and websites. Excel plug-in for integrating data in Office applications.
- Flexible rule-based processing of data with modules, to transform, enrich, or derive data.
- Deployment as on-premises or cloud solution (SaaS) with flexible license and support models. Our SaaS solution is powered by a partner specialized in regulatory compliant hosting and operation of software solutions in the financial market.
- Meeting highest technical requirements in terms of performance and scalability.
- Reliably in use by customers for many years.
